Mesh shelving

Mesh shelving is designed for storing both palletised goods and smaller items. The open mesh design allows light, air and water to pass through, helping to reduce dust build-up and allowing water from sprinkler systems to reach through the shelves.

The lightweight design makes the shelves easy to handle, while the waterfall design allows for easy installation without additional fixings. Made from galvanised steel and available in several sizes, the shelves can be adapted to different storage needs. Mesh deck dividers are also available for separating smaller items.
