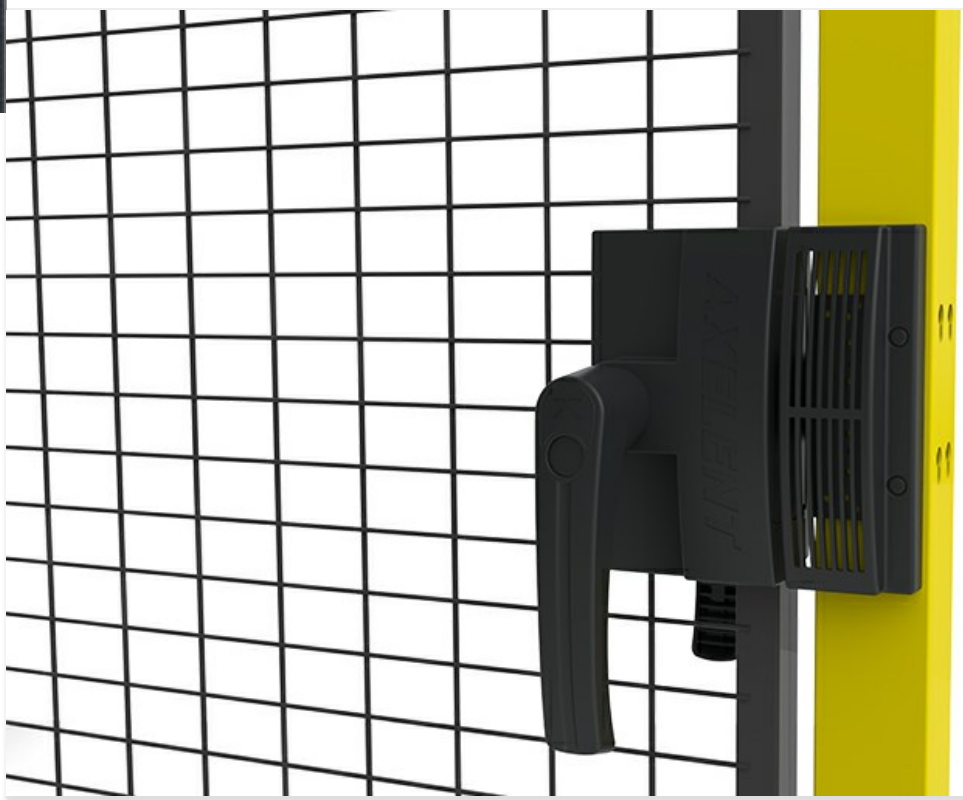
Hitch lock

This lock is an alternative to our X-lock and has an integrated mounting for non-contact switches. The lock has an adjustable hitch for eliminating any internal play. The handle is spring-loaded to remove the ability of the door to automatically fully close. To fully shut the door requires deliberate operation of the handle eliminating accidental closure. The external handle has an integrated padlock-loop which makes it possible to secure the door to prevent accidental closure when servicing or machine setting for example.

Note, padlock and/or switch are not included.



The X-Guard Hitch Lock is a reliable locking system for machine guarding, offering a secure alternative to the X-Lock. Designed for precision and safety, it features an adjustable hitch to eliminate internal play and ensure a firm closure. The integrated mounting allows for easy installation of non-contact switches for optimal safety.

Its spring-loaded handle prevents the door from fully closing automatically, requiring deliberate operation to secure it. This eliminates accidental closure, making it a practical choice for industrial environments. Additionally, the external handle includes a built-in padlock loop, allowing the door to be locked during maintenance or machine setup to prevent unintended access.

Compatible with all X-Guard doors, the Hitch Lock is an ideal solution for workplaces prioritizing safety and controlled access.

Note: Padlock and switch are not included.
