Push button enclosure for sliding door

The X-Guard push button enclosure is a durable and versatile solution for sliding door locking systems in machine guarding. Designed for up to 4 push buttons and 1 emergency stop, it fits all X-Guard locks and ensures industrial safety with flexible cable routing options.

The X-Guard push button enclosure is a robust and adaptable solution for integrating push button controls into sliding door locking systems. Made from black powder-coated metal (RAL 9011), it accommodates up to 4 push buttons (Ø22.5 mm) and 1 emergency stop button, offering a streamlined way to manage access in machine guarding applications.

For added flexibility, cabling can be routed from above, below, or behind the enclosure, allowing easy installation across different setups. If fewer than four push buttons are used, four black cover plugs (B00-038) are included to maintain a clean and professional appearance.

Measuring 340 x 53 x 56.5 mm, the enclosure is compatible with all X-Guard proprietary lock systems, ensuring seamless integration into industrial safety solutions. It is specially designed for sliding door applications, providing a secure and efficient access control solution.

Note: Push buttons and emergency stop button are not included.
