Kantstrimmel

X-Guard edge strip is available in two versions.

1) The rubber edge strip gives a soft and neat edge in places where the mesh panel has been cut out.

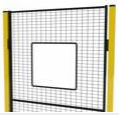

2) With the wider rubber strip, T01-21, intended to be used in the upper part of a standard panel to give you a smooth edge.

The X-Guard edge strip is used to cover sharp edges on cut mesh panels, helping to create a safer installation.

The edge strip is flexible and easy to install, making it easy to adapt to cut panel edges.
