X-Guard edge strip is available in two versions.

- 1) The rubber edge strip gives a soft and neat edge in places where the mesh panel has been cut out.
- 2) With the wider rubber strip, T01-21, intended to be used in the upper part of a standard panel to give you a smooth edge.

The X-Guard edge strip is designed to improve safety and aesthetics in machine guarding systems by covering exposed edges on mesh panels. It provides a smooth finish, reducing sharp edges and enhancing the durability of panel installations.

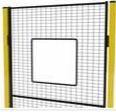

Available in two versions, the **10-9841 rubber edge strip** offers a soft and neat edge solution for areas where mesh panels have been cut, ensuring a professional and secure finish. The **T01-21 wider rubber strip** is specifically designed for placement along the upper part of standard panels, providing a clean and smooth edge.

Both strips enhance industrial safety by minimizing sharp edges and improving the overall appearance of the X-Guard system. Easy to install, they are essential accessories for maintaining a polished and safe working environment.
