Impact High with Floor Barrier

The Impact High with Floor Barrier is an innovative solution designed to offer pallet racking end-frame protection and perimeter security within your workspace. This system combines the benefits of the Impact High and the Floor Barrier, specifically engineered to absorb significant impacts from vehicle forks, AMRs, AGVs, and other low-height hazards, ensuring the safety of your assets and infrastructure.

The Impact High with Floor Barrier is ideal for safeguarding vital infrastructure from the everyday risks associated with vehicle forks and pallets in transit. Its design increases the durability and safety of your facility, helping to maintain operational continuity against specific challenges posed by fork-equipped vehicles. Installation of the Impact High with Floor Barrier is streamlined and minimally invasive, with a low fixing count and spanning up to 3.2 meters in a single section.

Moreover, the system's adaptability is a key feature, equipped with push-fit parts and heavy-duty expansion bolts for easy assembly. Our drilling template facilitates quick adjustments, allowing the system to adapt to the evolving safety requirements of your workspace.
