Porte battante détachable

La porte battante détachable X-Guard est une porte battante mobile sur roues, conçue pour être utilisée de la même manière qu'une porte battante normale. C'est un choix idéal lorsque l'espace autour est limité. **Au besoin, vous pouvez la détacher et la rouler sur le côté**.

The X-Guard detachable hinge door is a versatile and mobile safety solution designed for industrial environments where space is limited. Functioning like a traditional hinge door, it features wheels for easy movement, allowing it to be quickly detached and rolled aside when needed. This flexibility makes it ideal for dynamic workspaces that require frequent adjustments to access points.

Built with a sturdy handlebar for enhanced stability, the door is easy to operate while maintaining its structural integrity. Each support wheel is equipped with a parking brake, ensuring secure positioning when in use.

Compliant with the Machinery Directive 2006/42/EC, this mobile hinge door provides a reliable and adaptable solution for machine guarding, warehouse entry points, and other industrial safety applications. Its space-saving design and mobility make it a smart alternative to fixed doors in confined areas.

Note: The maximum width may vary depending on the locking solution. Posts, handles, and panels are not included in the door package.
