

Profilo in gomma

Profilo in gomma per bordature e protezione dei tagli nei pannelli a rete.

10-9841: Il profilo in gomma permette di ottenere un bordo netto e ben rifinito nei punti in cui è presente il taglio.

T01-21: Il profilo in gomma, è predisposto per essere utilizzato nella parte superiore del pannello in modo da ottenere un profilo definito.

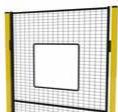

The X-Guard edge strip is designed to improve safety and aesthetics in machine guarding systems by covering exposed edges on mesh panels. It provides a smooth finish, reducing sharp edges and enhancing the durability of panel installations.

Available in two versions, the **10-9841 rubber edge strip** offers a soft and neat edge solution for areas where mesh panels have been cut, ensuring a professional and secure finish. The **T01-21 wider rubber strip** is specifically designed for placement along the upper part of standard panels, providing a clean and smooth edge.

Both strips enhance industrial safety by minimizing sharp edges and improving the overall appearance of the X-Guard system. Easy to install, they are essential accessories for maintaining a polished and safe working environment.
