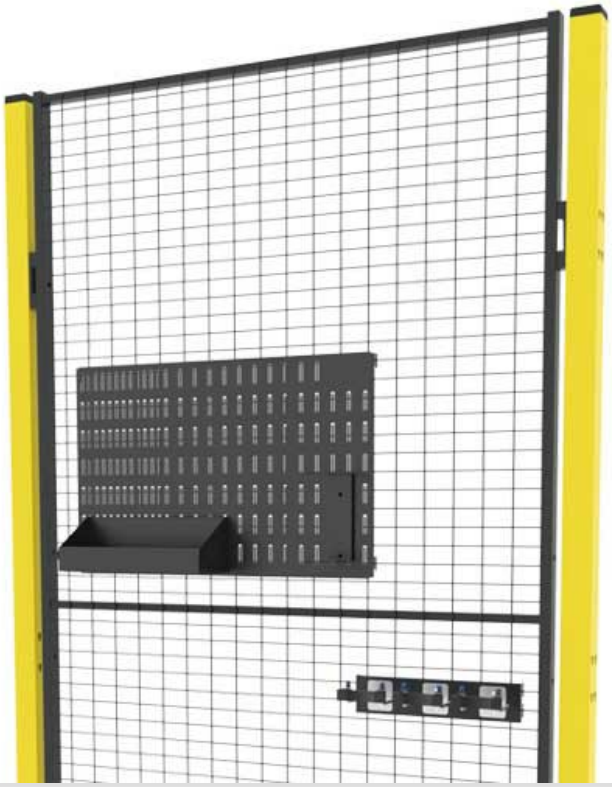
# Quick On

För att organisera runt robotceller och annan automationsutrustning som är inhängnad med säkerhetssystem finns nu ett komplett system för att få ordning och reda.
Att ha allt på rätt plats vid rätt tidpunkt gör att man slipper leta efter de saker man behöver när man gör allt från städning, informerar, dokumenterar eller ställer om sin automationsutrustning. Detta förorsakar oftast onödiga fördröjningar och stilleståndi
produktionsceller.



We now offer a complete range of organization products designed to keep work areas tidy around robot cells and automation equipment enclosed by a machine guarding system. Ensuring that essential tools, cleaning supplies, and documents are always within reach eliminates unnecessary searching and reduces downtime.

By keeping everything in its place, operators can quickly access what they need for cleaning, documentation, information sharing, and machine setup. This improves workflow efficiency, minimizes disruptions, and helps maintain smooth operations in production cells.

A well-organized workspace not only enhances industrial safety but also contributes to optimized automation performance. Our solutions integrate seamlessly with safety systems, creating a streamlined and productive working environment.
