

Triple telescopic sliding door

A triple telescopic sliding door with rails is used where a large opening is required but where space is limited in the sideways direction. The panels overlap each other instead sliding to the side.

Maximum height is 2500 mm and maximum width is 3x1500 mm. **The maximum width varies depending on the used locking solution.*

(Posts, handles and panels are not included in the door package. Opening dimensions may be limited depending on the type of lock chosen.)
